

Manan Patel

Robotics & Automation Support Specialist

Ontario, Canada | +1 437-937-5111 | mananpatel442@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Robotics and automation support professional with hands-on experience supporting AMR/AGV warehouse systems, robotic fleet operations, Linux-based diagnostics, ticket-based incident handling, and technical SOP development. Experienced in troubleshooting robot and station-level issues involving cameras, scanners, RFID/PPTL devices, IPC/AIO workstations, sensors, motor/control modules, battery systems, and network-connected peripherals. Skilled in reviewing system logs, JSON files, Kubot/VDA-related diagnostic outputs, and backend tool results to support fault isolation, downtime recovery, preventive/corrective maintenance, and post-repair validation in high-volume fulfillment environments.

TECHNICAL SKILLS

Robotics & Automation: AMR/AGV systems, RTP, RMS, TTP, warehouse automation, robotic fleet monitoring, GreyMatter, PPS/PPTL, Kubot logs, VDA communication logs

Diagnostics & Support Tools: Linux, SSH, MobaXterm, PuTTY, system logs, JSON file review, ping testing, packet-loss checks, backend diagnostic commands, auto-script execution, Zendesk, JIRA, Confluence

Hardware & Devices: Cameras, LiDAR, IMU sensors, RFID readers, barcode scanners, IPC/AIO stations, WMD/LMD modules, battery/BMS, wiring harnesses, safety devices, network-connected peripherals

Maintenance & Reliability: Preventive maintenance, corrective maintenance, root cause analysis, SOP documentation, ticket documentation, post-repair validation, downtime recovery, PLC/HMI simulation, ladder logic basics, Power BI, Excel

PROFESSIONAL EXPERIENCE

Vanya IT Solutions / GreyOrange Operations | Ajax, ON **Jan 2026 - Present**

Robotics & Automation Support Specialist (progressed from Robotics Coordinator)

- Support uptime, recovery, and maintenance coordination for RTP, RMS, and TTP robotic workflows used in inventory movement, picking, sorting, and automated fulfillment operations.
- Diagnose robot and station-level faults involving cameras, scanners, RFID devices, PPTL modules, IPC/AIO workstations, battery/BMS components, motor/control modules, safety devices, and network-connected automation peripherals.
- Use Linux, SSH, MobaXterm, PuTTY, ping tests, system logs, JSON files, Kubot diagnostic outputs, VDA-related logs, and backend commands to validate device communication, isolate faults, and support rapid incident recovery.
- Create, update, and track Zendesk/JIRA tickets by documenting symptoms, troubleshooting steps, fault findings, escalations, recovery actions, and final validation results for production incidents.
- Execute existing auto-scripts, diagnostic commands, and validation procedures to review robot/service health, verify communication, confirm recovery status, and support escalation to remote engineering teams.
- Create SOPs, troubleshooting checklists, and validation procedures for recurring camera, scanner, PPTL, robot recovery, hardware, and communication issues to standardize field troubleshooting.
- Support preventive/corrective maintenance, hardware replacement validation, spare-part audits, ECN/firmware checks, and post-repair functional testing with operations, maintenance, engineering, and remote support teams.

Tilray Brands Inc. (Aphria Facility) | Leamington, ON **Nov 2024 - Dec 2025**

Machine Operator - Automated Packaging & Labeling Systems (Contract)

- Operated automated cannabis packaging, labeling, and tax-stamping equipment, supporting conveyor-fed production flow, product counts, label/stamp placement, lot/batch accuracy, and daily line targets.
- Performed first-level troubleshooting for jams, feed issues, label misalignment, sensor faults, tension/pressure issues, and minor machine adjustments to reduce line interruptions.
- Supported cleaning, setup checks, changeovers, basic preventive maintenance, and regulated production documentation while following SOPs, safety requirements, and FIFO practices.
- Worked with production, quality, and maintenance teams to identify packaging defects, material shortages, equipment stoppages, and process delays during high-volume runs.

IT Systems Analyst Co-op | Windsor, ON

Dec 2023 - Sep 2024

Systems, Reporting & Technical Documentation Support

- Supported operational reporting, system documentation, and data validation by analyzing workflow issues, user requirements, and process gaps across business operations.
- Wrote SQL queries and used Excel/Python to extract, clean, validate, and summarize operational datasets for dashboards, reporting, and issue tracking.
- Created process flow documentation, data mapping sheets, workflow notes, and support documentation to improve communication between users, technical teams, and stakeholders.
- Assisted with ticket tracking, issue documentation, reporting updates, and troubleshooting support, building transferable skills in technical documentation and system-based problem solving.

SELECTED PROJECTS

Robotic Fault Troubleshooting & SOP Playbook

2026

Portfolio / Work-Related Documentation Project

- Created privacy-safe SOP templates for AMR/AGV and station faults involving camera communication, scanner/RFID/PPTL issues, robot recovery, device communication, harness/connector inspection, log review, and post-repair validation.
- Structured each procedure around symptoms, diagnostic checks, corrective actions, escalation criteria, and final verification to support consistent recovery and knowledge sharing.

PLC/HMI Conveyor & Sorting Simulation

2026

Portfolio Project

- Designed a simulated material-handling system with conveyor start/stop logic, tote detection, diverter control, photoelectric sensors, motor control, E-stop logic, reset sequence, alarms, and HMI screens.
- Prepared an I/O map, basic ladder logic, control sequence notes, alarm matrix, and troubleshooting steps to demonstrate Automation Technician controls knowledge.

Automation Reliability & Downtime Dashboard

2026

Portfolio Project

- Built an Excel/Power BI dashboard concept using anonymized fault data to track downtime, repeat failures, spare-part usage, PM completion, MTTR/MTBF, and top recurring automation fault categories.

EDUCATION & CERTIFICATIONS

Master of Engineering, Electrical and Computer Engineering - University of Windsor, Ontario, Canada | 2023 - 2024

Bachelor of Engineering, Computer Engineering - Gujarat Technological University, India | 2018 - 2022

Certifications / Training: Python for Everybody - University of Michigan; Industrial Automation Basics - LinkedIn Learning; AWS Certified Solutions Architect - Associate (In Progress)
